

On Saturday, March 30th, at 1PM, at Indian River State College, the Martin County Conservation Alliance will host a presentation by Dr. Larry Brand a professor at the University Miami Rosenstiel School of Marine & Atmospheric Science. He will discuss his research on the impact of neurotoxins such as BMAA that he discovered in crabs and shrimp harvested on our coastlines. BMAA occurs in cyanobacteria, otherwise referred to as blue green algae, and can have serious effects on our mental health.

All are invited to this free presentation.
